Competence in Safe Asset Management

High Security Solutions

High Security Solutions for your IT Systems, Data, Records and Archives, Valuables, Artefacts and Cultural Assets

Fortifications in the Swiss Alps are the basis of our comprehensive high security services. The mountain is symbol and synonym for the maximum of fundamental protection and security that we see as our task. Comprehensive and uncompromising like the mountain.

Increasing Protection and Security Requirements

The technological and social developments of today continuously demand new security solutions and concepts. Dependence of the industrial activity on own computer systems and the vulnerability of important and sensitive business records continually increase. The risk of massive damage created by acts of terrorism, sabotage, larceny, manipulation, espionage, and natural disasters tend upwards.

Protect your Assets

Swiss Data Safe Ltd. operate their own high security underground facilities, deep in the Swiss mountains in a secret and safe place. Those fortifications were initially built for the protection of the Swiss government in case of war. Nowadays, the facilities are equipped with multi-stage, most modern technical and electronic high security systems. The comprehensive security measures provide maximum resistance to attacks from physical and electronic sources, environmental forces, riots, disasters and terrorist attacks and meet the highest security requirements. The facilities belong to the safest places in the world.

Safe Asset Management

Swiss Data Safe Ltd. is your competent partner for the safe keeping and administration of your assets. As a service provider, we elaborate integral protection and security concepts and solutions for you – project-related, business-wide, world-wide.

**«Protection and Security of your Industrial Values
is a Strategic and Existential Management Task.»**

Protect your Assets

All industrial values, information technology in particular, require comprehensive security measures. Protection and security for operative systems and data can be achieved through external operation as well as storage, record keeping and organised administration in a high security

environment. This environment is well suitable for the safe keeping of your archives and records, valuables, artefacts and cultural assets. Our own fortification and high security facilities in the Gotthard granite have been outlined and built to provide maximum protection and security.

**«Customers from all over the World
have Confidence in our High Security Solutions.»**

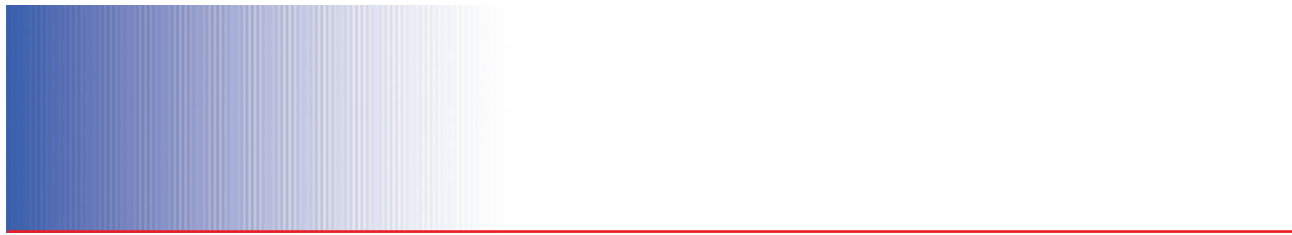

The Protection of your Assets is guaranteed by

- Maximum material
- Technical and electronic security against burglary, espionage, destruction, larceny, manipulation, terrorist attacks, elementary forces
- Permanent surveillance of the facilities and restricted, recorded access
- Breakdown-safe facilities around the clock: 24 hours a day 365 days a year
